

Mental Health Continuum

People from all walks of life experience stress in their personal and work lives. You encounter stressful events at work that can have an impact on your physical and mental health. But the struggles of everyday life — divorce, illness, death of a loved one, addiction — can be just as serious.

It's natural to go through ups and downs in life. Sometimes you bounce right back when you're feeling down. Other times, you may need help to recover and return to feeling like your usual self.

So how can you tell when you need help? The Mental Health Continuum Model illustrates the different mental health phases you may experience throughout your life and career. It also describes the physical and mental effects associated with each phase and suggests actions that may help. The model includes the following phases:

- Healthy and adaptive coping (green)
- Mild and reversible distress (yellow)
- More severe and persistent functioning impairment (orange)
- Clinical illnesses and disorders requiring concentrated medical care (red)

It's important to remember that you can move in either direction along the spectrum, which means there is always the possibility to return to full health and functioning.
